IEEE 802.11 MAC Protocol: CSMA/CA

802.11 sender

1 if sense channel idle for **DIFS** then transmit entire frame (no CD)

2 if sense channel busy then

start random backoff time

timer counts down while channel idle

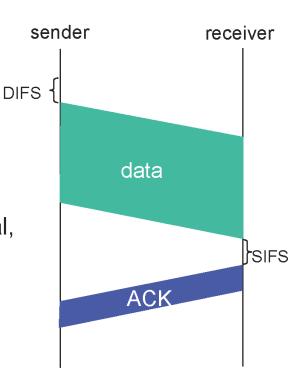

transmit when timer expires

if no ACK, increase random backoff interval, repeat 2

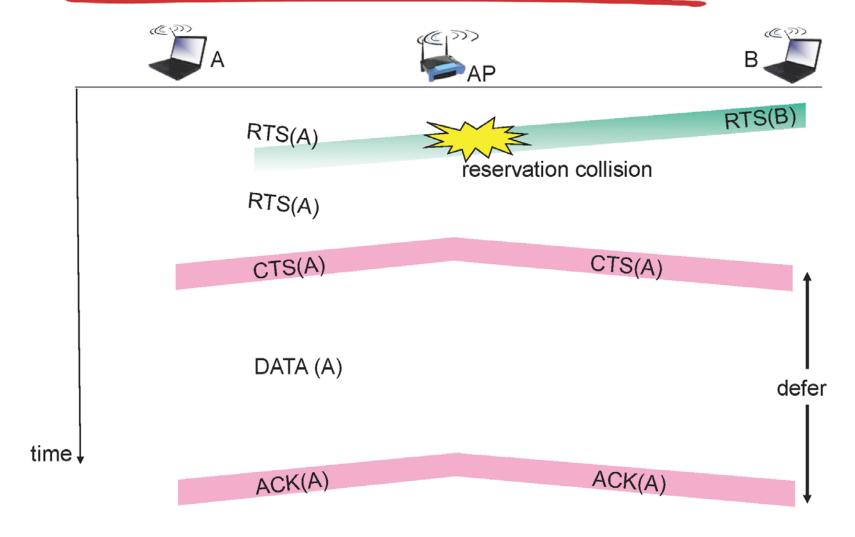

802.11 receiver

- if frame received OK

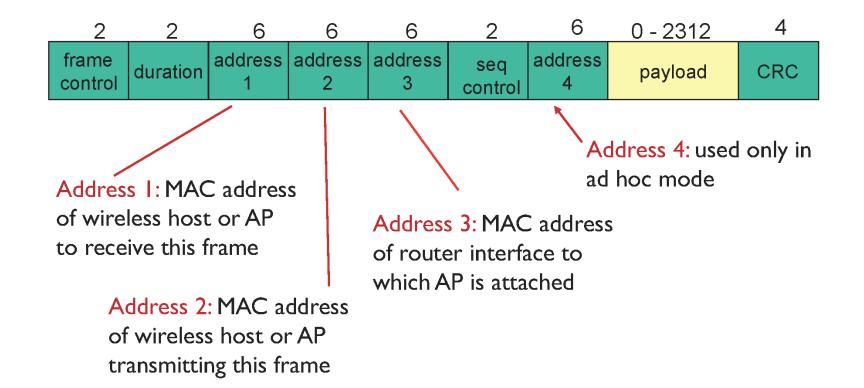

return ACK after **SIFS** (ACK needed due to hidden terminal problem)

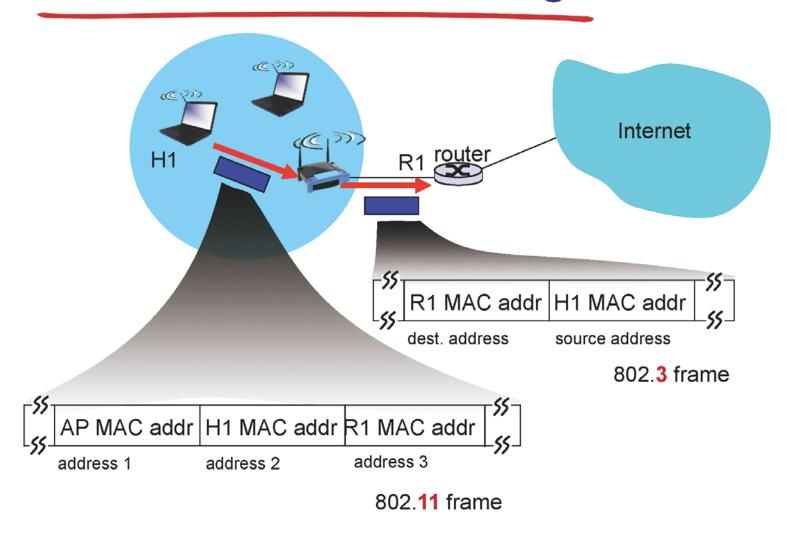

Collision Avoidance: RTS-CTS exchange

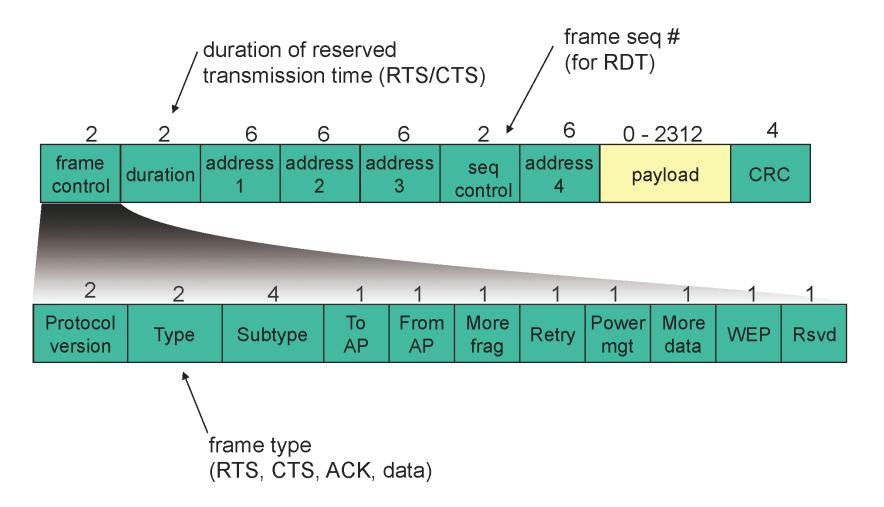

802.11 frame: addressing

802.11 frame: addressing

802.11 frame: more

802.11: mobility within same subnet

- HI remains in same IP subnet: IP address can remain same
- switch: which AP is associated with HI?
 - self-learning (Ch. 5): switch will see frame from HI and "remember" which switch port can be used to reach HI
